

Mold Services

Our company offers mold awareness/remediation training for both the construction and general industry audience. This training is an interactive 4-hour course designed to inform participants on the hazards of mold, causes of mold and remediation procedures. We also develop mold remediation plans and supervise onsite work when mold remediation projects are being implemented.

Our industrial hygienists are involved in mold sampling and airborne monitoring. We assist companies with mold determination, mold type and source identification and possible remediation procedures. We also offer mold monitoring allowing personnel to make smart decisions when determining what type of mold remediation plan they want to implement.

Got mold? STEP outside the Mold trap and let us help you!

STEP...up to compliance!
