

# Onsite Services

Our onsite service creates a partnership allowing us to help you where you need it most. You receive experienced personnel at your facility to work on:

- written program updates
- development of procedures or compliance programs
- tool-box type safety training
- facility, equipment, task inspections
- facilitate safety meetings
- conduct audits
- provide safety observations

On the environmental side, we can assist with:

- Inspections
- Sampling
- Data entry
- Compliance reviews

We contract onsite for one day/week or several days per week. We believe that this service allows you to request assistance when you are busiest, need a short amount of help to "catch up", want to add a program or training session - but can't find the time to pull it together, or just want to review what is going on and have some consistency to your facility's environmental, safety and health program.
