

Process Safety Management

We conduct audits of Process Safety Management (PSM) programs according to the requirements of 29 CFR 1910.119. Our PSM audits incorporate protocols established in the OSHA Compliance Directive CPL 2-2.45A, addressing records review, employee interviews, access to process safety information, operating procedure updates, document retention, observation of onsite conditions, and training.

We have developed a convenient audit checklist Excel-based audit worksheet that incorporates OSHA/EPA audit issues and guidance. This checklist has several convenient features, such as the ability to regroup audit questions in accordance with the identities of the interviewees. This can significantly expedite the audit and documentation process.

We document audit findings, and, if part of the project, provide specific recommendations for program improvements. In addition to full program audits, we also conduct streamlined PSM reviews that provide a means of identifying significant program deficiencies.

We work with you to **STEP** toward compliance!

STEP...up to compliance!
