

Respiratory Fit Testing

Respiratory Fit Testing is required by OSHA for anyone wearing a tight fitting respirator (negative or positive pressure) in your workplace. Our company has worked with clients for many years conducting **qualitative** and **quantitative** fit tests. Fit testing for respirators can be very time-consuming, especially if you have a large number of employees who wear respirators, or may have to wear them in an emergency situation. Our consultants come right to your workplace and are able to get these fit tests done accurately and efficiently. We will print you a copy of the quantitative/qualitative fit testing results performed and you will have an instant copy for your records and to present to OSHA, if and when they come in for a workplace inspection.

Respirator fit testing is required:

- prior to initial use of the respirator
- whenever a different facepiece (size, style, model or make) is used
- annually, thereafter
- when an employee's physical condition changes which could affect the fit of the respirator

Let us help you in determining the type of fit testing you need in your workplace, and let us do the work! We'll save you valuable time and money!

STEP...up to compliance!
